**UPS**

The first UPS based with lithium batteries technology that guarantees minimum **one hour back-up time** at maximum power.

The PROYTEN is designed as a double conversion UPS with zero transfer time perfect for critical devices such as servers and ATM. It's equipped with powerful AC charger. If an outage occurs, the energy stored in the battery bank will be converted to supply the load without interruptions. As a UPS it also protects the devices against over voltage, spikes, brown-out with a constant output voltage.
